

# Electrical safety indoors

Don't use appliances with a frayed flex or a cracked plug.

Never take mains appliances into the bathroom or use them near any water.

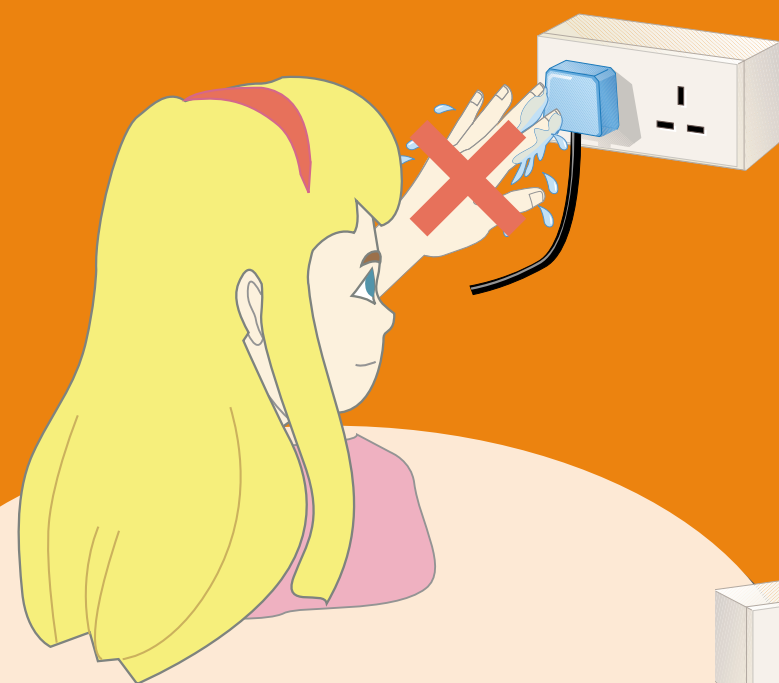

**WARNING!**  
**DO NOT EXCEED**  
**3000 Watts**

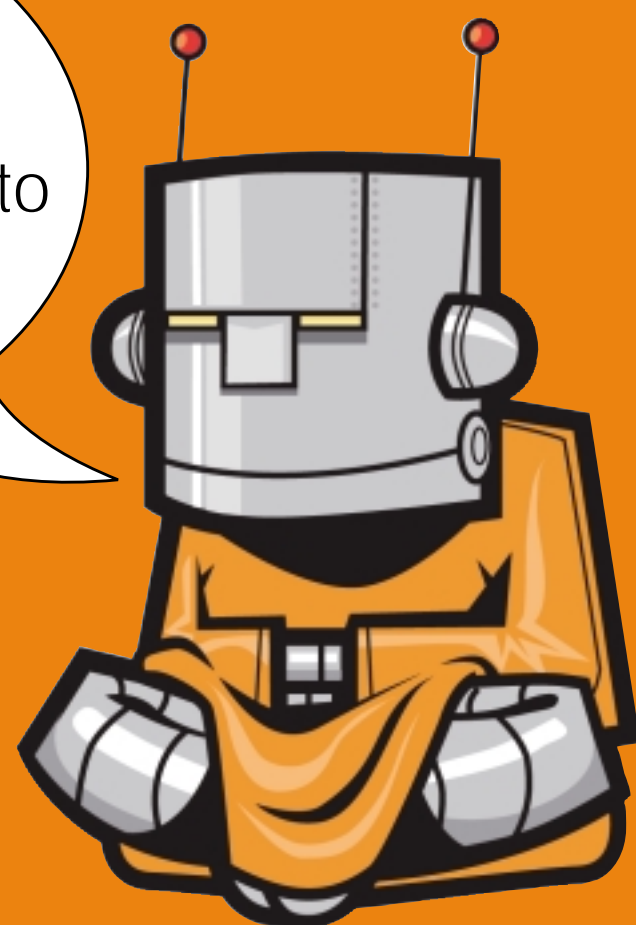

If you use an adapter be careful not to overload the socket.

The total power must not be more than 3000 watts.

Never handle plugs or switches with wet hands.

It's easy being a bright spark... just get switched on to a few simple rules.

If a plug or switch becomes hot in use, turn off and consult a qualified electrician.
